

## Enter an item name

» Required field

### Freestyle project

Classic, general-purpose job type that checks out from up to one SCM, executes build steps serially, followed by post-build steps like archiving artifacts and sending email notifications.

### Pipeline

Orchestrates long-running activities that can span multiple build agents. Suitable for building pipelines (formerly known as workflows) and/or organizing complex activities that do not easily fit in free-style job type.

### Multi-configuration project

Projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds, etc.

☐ GitHub hook trigger for GITScm polling ?

☒ Poll SCM ?

Schedule ?

\* \* \* \* \*

No schedules so will only run due to SCM changes if triggered by a post-commit hook

## Build Steps

≡ Execute shell ?

Command

See [the list of available environment variables](#)

```
docker build -t mynodeimg .  
docker stop mynodecontainer  
docker rm mynodecontainer  
docker run -d --name mynodecontainer -p 8001:8000 mynodeimg
```
